Java 21, Spring Boot 3, FastAPI, React, TypeScript, PostgreSQL, Docker *github.com/SaiSreeHarsha2005*
- Built a full-stack platform to manage the college capstone project lifecycle (proposals, teams, guide allocation, reviews) with a **Spring Boot** backend exposing **32 REST endpoints**, a **React** frontend and a **FastAPI** Python microservice, run with **Docker Compose**.
- Designed a **14-table PostgreSQL** schema; secured APIs with **JWT** authentication and role-based access control across **6 user roles**; enforced workflow rules such as teams of 2–4 students, a maximum of 3 projects per guide and a 6-stage proposal approval flow.
- Added AI proposal screening using **cosine similarity** to flag duplicate projects, tested with **3 years** of past project data and **1,000+** student records. Currently in testing at my college, with use planned from the next academic year.
